

Lost & Found Web Application

Day 3 Documentation

1. Day 3 Overview

Day 3 focused on improving the Admin dashboard and polishing the application after the main Lost & Found workflows were implemented. The work concentrated on making administrative information easier to understand and keeping the Admin area separate from normal user navigation.

2. Work Completed

Step	Work	Result
1	Admin dashboard review	Reviewed the existing Admin dashboard and report-management workflow.
2	Admin statistics	Added statistics for Total Items, Lost, Found and Claimed reports.
3	Statistics card UI	Displayed the four statistics as separate visual cards using existing CSS.
4	Report sections	Kept active reports separate from the Claimed / Closed section.
5	Approval controls	Approve and Reject actions remain available only for Pending reports.
6	Admin navigation	Kept Admin out of the normal Navbar and retained /admin as a separate route.

3. Admin Dashboard Statistics

The dashboard presents four statistics as separate cards:

- **Total Items** – total number of reports currently stored.
- **Lost** – number of reports whose item status is Lost.
- **Found** – number of reports whose item status is Found.
- **Claimed** – number of reports whose item status is Claimed.

4. Admin Report Management

Active reports remain under All Reports, while reports with status Claimed are shown separately under Claimed / Closed Items.

For Pending reports, the Admin can Approve or Reject the report. After the approval status changes, the Approve and Reject buttons are no longer displayed. The Remove action remains available.

5. Admin Navigation

The Admin navigation was reviewed so that normal users do not see an Admin link in the standard Navbar. The final design keeps the Admin dashboard at the separate **/admin** route.

The current project does not implement role-based Admin authorization. Admin remains separate from the normal navigation as part of the current project design.

6. UI Improvement

The Admin statistics were changed from simple text headings into individual cards. The existing **.admin-stats** and **.admin-stat** CSS classes were reused to keep the implementation small and consistent with the existing application styling.

7. Admin Structure

Section	Purpose
Statistics Cards	Quick overview of Total, Lost, Found and Claimed reports.
All Reports	Manage active reports and review their approval status.
Pending	Approve or Reject submitted reports.
Approved / Rejected	Display the final approval state without approval buttons.
Remove	Remove an inappropriate or invalid report.
Claimed / Closed Items	View reports that have reached the Claimed status.

8. Testing Performed

- ✓ Admin dashboard loads reports from the backend.
- ✓ Statistics display Total Items, Lost, Found and Claimed counts.
- ✓ Pending reports show Approve, Reject and Remove actions.
- ✓ After approval or rejection, the Approve and Reject buttons disappear.
- ✓ Claimed reports are separated into the Claimed / Closed Items section.
- ✓ The normal Navbar does not contain an Admin link.

9. Day 3 Result

Day 3 improved the administrative side of the application without adding unnecessary complexity. The Admin dashboard became easier to read through statistics cards, report states remained clearly separated, and the Admin route stayed separate from normal user navigation.
